

Dear Hiring Manager,

I am excited to apply for the **Lead Software Engineer** position. While I am at the beginning of my professional career, I have built a strong foundation in backend engineering, full-stack development, and AI-powered applications through internships and personal projects.

During my internship at Western Railway, I developed a Flask-based backend automation system adopted by 50+ staff members, built secure REST APIs with JWT authentication, optimized MySQL databases handling over 100,000 records, and integrated asynchronous processing using Celery and Redis.

Beyond my internship, I co-founded **Synthetica**, an AI-powered content detection platform where I designed the backend architecture, developed machine learning inference APIs, and implemented secure authentication and scalable workflows. I have also built cloud-based applications using Azure and production-ready backend systems using Flask, Node.js, Express.js, and SQL databases.

I enjoy solving complex engineering problems, learning new technologies quickly, and collaborating with teams to deliver high-quality software. I am eager to contribute my technical skills, ownership mindset, and passion for continuous learning to your engineering team.

Thank you for your time and consideration. I look forward to the opportunity to discuss how I can contribute to your organization.

Sincerely,
Elvis D'Souza
